Topic 8 - Reactions of Organic Compounds - A-Level Chemistry

Organic chemistry is the study of the structure, properties, composition, reactions, and preparation of carbon-containing compounds. Covalent bonding is a chemical bond that involves the sharing of electron pairs between atoms.

Basic Concept of Organic Chemistry | A-Level Chemistry ...

Carbon atoms can bond with other carbon atoms to form an enormous range of compounds with different carbon-chain lengths. The simplest organic compounds are a family of saturated hydrocarbons called the alkanes, shown below. Note the following points. The name of the alkane ends with -ane.

Organic chemistry is the study of the millions of covalent compounds of the element carbon. These structurally diverse compounds vary from naturally occurring petroleum fuels to DNA and the molecules in living systems. Organic compounds also demonstrate human ingenuity in the vast range of synthetic materials created by chemists.
