elements of a triangle.

Sine and Cosine Law Calculator -

Page 33/36

Online Library Angles In A Multi Step Problems

mathportal.org

The sum of angles in a quadrilateral is 360° Step 3: Plug in the values from the question and from the sketch. $360 = x + x + (x + x) + 2(x + x + x + x) - 60$.
Combine like terms $360 = 4x + 2(4x) - 60$
 $360 = 4x + 8x - 60$ $360 = 12x - 60$.
Isolate variable x $12x = 420$ $x = 35$.

Online Library Angles In A Multi Step Problems

The question requires the values of all the angles.
