Aquaponics is an ecologically-applied horticultural production technique that is both ancient, used by the Aztecs in their construction of vegetated chinampas floating islands, as well as rapidly emerging in modern times as a biofiltration technique used in combination with commercial recirculating aquaculture systems.

[An Introduction to Aquaponics - PowerHouse Hydroponics](#)

Aquaponics is not a new concept. In Asia, it has long been a practice to introduce beneficial fish species to flooded rice paddies to help with insect control as well as to provide fertilizer for the plants in the form of fish waste. When the paddies are drained to allow harvesting, the fish are harvested as well and used as a protein source.

[New York Aquaculture - Aquatic Network](#)

Aquaponics is the effective combination of the practices of aquaculture and hydroponics to create a sustainable, self-sufficient ecosystem that can be harvested like a farm. In order to create an aquaponics system, an aquaculture subsystem and a hydroponics subsystem must first be created, along with the addition of bacteria.
