Project Several projects require sound reproduction to add some kind of functionality. Among these projects, we highlight: accessibility for the visually impaired, MP3 music players and the execution of voice sounds by robots, for example. In all of these systems, we need an MP3 sound reproduction device to connect to the Arduino.

Audio Player Using Arduino With Micro SD Card : 7 Steps ...

In order to have the Arduino access the LEDs, you have to build a small circuit on a solderless breadboard. The breadboard has two parts: the inner rails (which run width-wise) and the outer rails (which run length-wise). The rails are electrically connected along their lines, so you can connect components without actually soldering them together.

I'm the happy owner of the book Arduino Music and Audio Projects by Mike Cook. I am experimenting with the theremin in chapter 5. The code comments in the book say that it spans 6 octaves. However, mine does not seem to span that much. I am using potentiometers instead of the distance sensor in the original project.
