Using ASP.NET

Core

ASP.NET Core is a collection of small, modular

components that can be plugged into your

application to let you build web applications and microservices.

Within ASP.NET

Core you will find

APIs for routing, JSON serialization, and rigging up MVC controllers and views. Historically, ASP.NET came with the .NET Framework—you could not separate the two.

There are several reasons why it makes sense to build super-lightweight HTTP services (or, despite all the baggage the word brings,

Online Library Building

“microservices”). I do not need to go into all the operational or architectural benefits of such approach to system development, as it has been discussed a lot elsewhere.
