Use this study tool to master the content from your Today's Medical Assistant: Clinical & Administrative Procedures, 2nd Edition textbook! Corresponding to the chapters in the textbook by Kathy Bonewit-West, Sue Hunt, and Edith Applegate, this study guide helps you understand and apply the material with practical exercises, activities, flashcards, checklists, review questions, and more. Chapter assignment tables at the beginning of chapters guide you through textbook and study guide assignments, and make it easy to track your progress. Laboratory assignment tables list the procedures in each chapter, including study guide page number references, and indicate the procedures shown on the DVDs. A pretest and posttest in each chapter measure your understanding with 10 true/false questions. Key term assessments include exercises to help in reviewing and mastering new vocabulary. Evaluation of Learning questions let you assess your understanding, evaluate progress, and prepare for the certification examination. Critical thinking activities let you apply your knowledge to real-life situations. Practice for Competency sections offer extra practice on clinical skills presented in the book. Evaluation of Competency checklists evaluate your performance versus stated objectives and updated CAAHEP performance standards. Updated content includes exercises for topics such as electronic medical records, advanced directives, HIPAA, emergency preparedness, ICD-10 coding, documentation, medical office technology, medical asepsis, vital signs, pediatrics, colonoscopy, IV therapy, and CLIA waived tests. New activities provide practice for the Today's Medical Assistant textbooks' newest and most up-to-date content. New Emergency Protective Practices for the Medical Office chapter includes procedures, critical thinking questions, and other activities to help you understand emergency preparedness. New Wheelchair Transfer Procedure and Evaluation of Competency checklist includes a step-by-step guide to this important procedure. New video evaluation worksheets on the Evolve companion website reinforce the procedures demonstrated on the textbook DVDs. New practicum and externship activities on Evolve provide practice with real-world scenarios.

This book is a concise but comprehensive text for review and self evaluation in the study of the microscopic anatomy of the major organ systems of the body. It aims to meet the requirements of students of Medicine, Dentistry, Histopathology, Mammalian Biology and the Paramedical Sciences. The subjects have been chosen to complement a program of physiology and dissection or prosection. Basic concepts of cell and tissue biology are presently considered in separate prerequisite units integrated with biochemistry and genetics and are not included in this text. The approach has been to focus on unique features or diagnostic differences between cells, their function and organisation into organs rather than on pure morphologic description. Developmental aspects of certain organs have been described where these contribute to understanding functional relationships between cells in organ systems. A uniform text structure (point form) helps the reader to organise, review and retain pertinent information. A summary precedes each chapter which helps to focus on key concepts. Each topic is also prefaced by a list of objectives which serve as a guide for review. In addition, a list of key words (bold in the text), phrases and concepts that should be defined as a result of reading the text. The terminology follows that in contemporary use giving alternative names according to Nomina Histological where possible. A series of plates illustrates in line drawings the major features of cells in organs based on electron micrographs. In addition, tables show functional relationships between cells or their products.

The Digestive System in Systemic Autoimmune Diseases represents the state-of-the-art in the field of digestive disorders in the most common systemic autoimmune diseases. The volume consists of an introductory chapter on imaging techniques in digestive diseases, followed by eight chapters on digestive manifestations in specific systemic autoimmune diseases. The final five chapters deal with digestive diseases with an autoimmune pathogenesis and systemic manifestations. International in scope, the table of contents reads like a Who's who in clinical research on systemic autoimmune diseases. More than 20 contributors from the European Union, the United States, Mexico and South Africa share their knowledge in this detailed volume. *One book of leading international clinical and scientific experts on autoimmune and digestive diseases *A practical guide to the identification, diagnosis and treatment of digestive involvement in patients with autoimmune diseases that will be useful for all medical specialties *Several diseases and conditions not included in other text books are included, some of which are of recent emergence *Each chapter is designed to serve as a Guide to Clinical Practice for each disease

Medical terminology, also known as med terms, is the language of health care. The language is used to precisely define the human body, it's functions and processes, and the procedures used in medicine. In this book, you will learn: -CHAPTER 1: Basic Word Elements -CHAPTER 2: Rules to Defining and Building Medical Terminology -CHAPTER 3: Types of Prefixes -CHAPTER 4: Types of Suffixes -CHAPTER 5: The Reproductive System -CHAPTER 6: The Urinary System -CHAPTER 7: The Digestive System -CHAPTER 8: The Respiratory System -CHAPTER 9: The Cardiovascular System -CHAPTER 10: The Lymphatic System & Immunity -CHAPTER 11: The Endocrine System -CHAPTER 12: The Musculoskeletal System -CHAPTER 13: The Special Senses -CHAPTER 14: The Nervous System and Psychiatry -CHAPTER 15: The Integumentary System -CHAPTER 16: Terms Related to Body Structures and Organization -CHAPTER 17: Conclusion
