sufficently solved problems are: Problem 1: The rates of chemical reactions leading to desired products are often too low to establish economically attractive processes. Problem 2: The conversion of many reactions of interest is thermodynamically limited, that is, the reactions proceed also in the opposite direction and convert

General Algorithm for Solving Isothermal Reactor Problems. 1. General Mole Balance Equation (GMBE) 2. Rate Laws • Write down rate law in terms of limiting reactant. 3. Stoichiometry • relate concentration to volume and number of moles (for batch reactors) or to volumetric flow rate and molar flow rate (for flow reactor)

CHEE 321: Chemical Reaction Engineering
The kinetic and the potential energy are negligible in many chemical reaction engineering applications, so Equation 15 becomes $Q V E = Q V (U + K + E P) = Q V U$ (16) we know that U is a function of the enthalpy, pressure, and volume, so $Q V U = Q V (H P V) = Q V X N c i = 1$
