The Complete Python Programmer: From Scratch to ...

After completing a program design, a programmer converts the design into a series of codes or instructions that the computer can run and execute, making use of a specific programming language and required platforms. After converting the design to code, a programmer runs the code and looks for bugs and errors. If a programmer finds code errors, appropriate corrections are applied, and the program is re-run.

What is a Programmer? - Definition from Techopedia

After the design process is complete, it is the job of the programmer to convert that design into a logical series of instructions that the computer can follow. The programmer codes these instructions in one of many programming languages. Different programming languages are used depending on the purpose of the program.
