While brake pads can last anywhere from 15,000 to 35,000 miles or more, rotors are generally expected to last through three or four brake pads changes. Because driving conditions, driving styles and other factors influence rotor life, it is difficult to come up with an average life expectancy for them.

The Average Life of Brake Rotors | It Still Runs
A brake rotor consists of two discs for the pads to press against, and a ribbed support between the discs for heat dissipation. The friction between the pads and rotors converts rotational energy into heat, bringing your vehicle to a stop. This friction warps the rotors over time. Warped rotors provide less consistent contact between your pads ...

Brake Rotors - Front & Rear Disc Brakes
The rotors spin along with the wheel, and when the brakes are applied, the brake pads grab the rotor to stop the wheel from spinning. On a motorcycle, however, the front and rear brakes usually operate independently of each other, in contrast to car brakes, which work to slow or stop all four wheels at once.

How Brake Rotors Work | HowStuffWorks
Brake pads and rotors are some of the more common items to replace on a vehicle. Brake pads need replacement every 25,000 to 35,000 miles, while rotors typically last 50,000 miles. These intervals may become shorter, depending on driving styles, heavy hauling or stop-and-go traffic, all of which can impact the intervals greatly.
