Muhammad Sajid Hamid Akash Kamran Haider Nitric oxide is a key regulating factor for physiological functions, when elevated during inflammatory conditions, NO, can lower endogenous antioxidants level.

This volume discusses how environmental pollutants are involved in the pathogenesis of neurological disorders, and covers specific mechanisms and risk factors, as well as the necessary strategies to reduce the adverse impacts of environmental pollutants on the human nervous system. With a collection of contributions from experts in environmental pollution, neurology and pharmaceutical chemistry, the book provides both an introduction to the pathogenesis of neurodegeneration, including the types and different classes of neurological disorders, and studies demonstrating the clear link between environmental contaminants (e.g. pesticides, smoking, mycotoxins, persistent organic pollutants (POP's), polychlorinated biphenyls, phthalates, nanomaterials) and the development of neurological disorders in vulnerable populations. The book fills in a gap in research on the topic by also covering state-of-the-art treatment strategies and mitigation measures for each type of pollutant. The book will be of interest to environmental scientists, pharmacologists, toxicologists, biochemists, biotechnologists, and food and drug regulatory organizations.

Citrus is one of the world's major fruit crops, with global availability and popularity contributing to human diets. Citrus fruits are the highest-value fruit crop in terms of international trade. Current annual worldwide citrus production is estimated at over 70 million tons, with more than half of this being oranges. The rise in citrus production is mainly due to the increase in cultivation areas, improvements in transportation and packaging, rising incomes, and consumer preference for healthy foods. Citrus fruit growth and quality are dependent on climatic conditions, in addition to soil type, water availability, cultural practices, and nutrient supply. The book briefly explains the fruit morphology, anatomy, physiology and biochemistry, growth phases, maturity standards, grades, and physical and mechanical characteristics of citrus trees. It also provides the foundation for understanding the growth, harvest, and post-harvest aspects of citrus fruits. Insect pests and diseases, irrigation, nutrition, and rootstocks are also addressed in this book.

The phytochemicals present in functional foods play a vital role in boosting immunity and promoting health. This book provides a comprehensive overview of the importance of functional foods and

antioxidants and their scavenging activity for preventing various health-related disorders. This book also covers the therapeutic and medicinal potential of various bioactive compounds for a healthy lifestyle, as well as examines different products containing functional ingredients that demonstrate health-promoting potential.

Journal of Social Sciences (COES&RJ-JSS) is an open access, double-blind, peer-reviewed and refereed journal published by Center of Excellence for Scientific & Research Journalism (COES&RJ LLC.), USA. The main objective of COES&RJ-JSS is to provide an intellectual platform for the international scholars. COES&RJ-JSS aims to promote interdisciplinary studies in humanities and social science and become the leading journal in humanities and social science in the world. The journal is published quarterly, in both print and online versions. COES&RJ-JSS publishes original papers, review papers, conceptual framework, analytical and simulation models, case studies, empirical research, technical notes, and book reviews. Special Issues devoted to important topics in humanities and social science will occasionally be published.

A unique handbook providing a set of good practice standards for both producers and consumers of Halal food This accessible, authoritative book covers all aspects of Halal from its origins through to how we expect Halal to develop in the coming years. It explains what Halal is, where it came from, how it is practiced, and by whom. In addition to putting Halal in a religious and cultural context, the book provides practical standards for those working in the Halal trade. It explains why there are so many different interpretations of Halal and why this needs to be resolved if international trade is to be developed. Each chapter in The Halal Food Handbook is written by leading experts in their particular field of study. The first one discusses how regulatory bodies have failed to stem the miss selling and adulteration of Halal foods. The next chapters cover the slaughter process and issues around good practice. The book then looks at regulators covering Sharia law, UK national laws, and the EU and outlines the legal framework for enforcing the law. It also compares and contrasts different types of religious slaughter for faith foods; examines attempts to set an international standard for trade; and discusses pork adulteration in Halal foods. The final chapter covers other aspects of Halal, including cosmetics, tourism, lifestyle, and banking, and finishes with a look at what the future holds for Halal. Written and edited by leading international experts in Halal who are backed by the Muslim Council of Britain Presents a set of good practice standards for both producers and consumers of Halal food Covers the complexity of the political, legal, and practical dimensions of Halal food production The Halal Food Handbook will appeal to a wide audience, including abattoirs, manufacturers, retailers, regulators, academics, public bodies catering for Muslims, and the broader Muslim community.

Recent advances in the pharmaceutical sciences and biotechnology have facilitated the production, design, formulation and use of various types of pharmaceuticals and biopharmaceuticals. This book provides detailed information on the background, basic principles, and components of techniques used for the analysis of pharmaceuticals and biopharmaceuticals. Focusing on those analytical techniques that are most frequently used for pharmaceuticals, it classifies them into three major sections and 19 chapters, each of which discusses a respective technique in detail. Chiefly intended for graduate students in the pharmaceutical sciences, the book will familiarize them with the components, working principles and practical applications of these indispensable analytical techniques.

Meat holds an important position in human nutrition. Although protein from this source has lower biological value than egg albumin, it is an exclusive source of heme iron and vitamins and minerals. Fat content and fatty acid profile from this source are a constant matter of concern. Though currently meat utilization is linked with an array of maladies, including atherosclerosis, leukemia, and diabetes, meat has a noteworthy role not only for safeguarding proper development and health, but also in human wellbeing. Enormous scientific investigations have proved that consuming meat has had a beneficial role in cranial/dental and gastrointestinal tract morphologic changes, human upright stance, reproductive attributes, extended lifespan, and maybe most prominently, in brain and cognitive development.

Crop Production Technologies for Sustainable Use and Conservation: Physiological and Molecular Advances presents an abundance of research on important and new production technologies for the successful sustainable production of major crops. The volume covers most of the major crops used the production of food, sugar, and commercial fiber. With the focus on sustainability and conservation issues in crop production, the chapters present molecular and physiological research and innovations for increasing yield, quality, and safety while also taking into considering increasing demand, diminishing water and land resources, and the agricultural consequences of climate change on crop production. The major crops discussed include wheat, mungbean, cotton, jute, sugarcane, eggplant, Solanum (such as potatoes and tomatoes), peppers, okra, fruits such as apples and pears, and more. The chapters report on new developments and research on production techniques related to various fertilizers, biosystematics and molecular biology of various crops, and building resistance to climatic change, including drought tolerance, salinity stresses, and more.
