The geophysical methods most commonly applied to archaeology are magnetometers, electrical resistance meters, ground-penetrating radar (GPR) and electromagnetic (EM) conductivity. These methods provide excellent resolution of many types of archaeological features, and are capable of high sample density surveys of very large areas and of operating under a wide range of conditions.

Late antique sites are often excavated badly and are hardly ever published in full, especially in the East. This volume seeks to provide a critique of this situation and exemplars of best practice. It will be an important reference work for scholars engaged in fieldwork and those seeking to use archaeological evidence in historical discussions.

Peter Drewett's comprehensive survey explores every stage of the dig process, from the core work of discovery and excavation to the final product: the published archaeological report. Main topics covered are: how an archaeological site is formed finding and recording archaeological sites planning excavations, digging the site and recording the results post-fieldwork planning, processing and finds analysis interpreting the evidence publishing the report. Illustrated with 100 photographs and line drawings, and using numerous case studies,
