

## Hydroxycinnamic Acid Antioxidants An Electrochemical Overview

As recognized, adventure as skillfully as experience approximately lesson, amusement, as without difficulty as understanding can be gotten by just checking out a books hydroxycinnamic acid antioxidants an electrochemical overview furthermore it is not directly done, you could agree to even more not far off from this life, approximately the world.

We have enough money you this proper as capably as easy pretension to get those all. We allow hydroxycinnamic acid antioxidants an electrochemical overview and numerous ebook collections from fictions to scientific research in any way. in the course of them is this hydroxycinnamic acid antioxidants an electrochemical overview that can be your partner.

Hydroxycinnamic acids have gained an increasing interest in health because they are known to be potent antioxidants. These compounds have been described as chain-breaking antioxidants acting through radical scavenging activity, that is related to their hydrogen or electron donating capacity and to the ability to delocalize/stabilize the resulting phenoxyl radical within their structure.

### ~~Hydroxycinnamic Acid Antioxidants An Electrochemical Overview~~

Measurements of the electrochemical behavior can be excellent guide with a lot of useful information about antioxidant activity of hydroxycinnamic acids [25-31]. During the analysis of results rated the relationship between the measured potential and antioxidant properties. Electrochemical studies in

Abstract Hydroxycinnamic acids (HCs) (coumaric acid, ferulic acid, sinapic acid, caffeic acid, chlorogenic acid, rosmarinic acid) are phenolic compounds found in fruits, vegetables, and beverages (coffee, tea, wine). HCs are of particular interest because of their biological properties and potential applications.

### ~~Antioxidant Properties of Hydroxycinnamic Acid Derivatives ...~~

Hydroxycinnamic acids (HCAs), namely rosmarinic acid, para-coumaric acid, caffeic acid, ferulic acid and sinapic acid, have a phenylpropanoid structure, which consists of an aromatic ring bearing different substituents (most often hydroxyl or methoxy groups) and a propane.

One of the most important HCA derivatives is chlorogenic acid (CGA) which has been reported as an efficient antioxidant agent [56, 57]. Chlorogenic acids (CGAs) are esters of HCAs and quinic acid. The most common CGA is formed by esterification of caffeic acid to quinic acid (Fig. 2).

### ~~Antioxidant Properties of Hydroxycinnamic Acids: A Review ...~~

These hydroxycinnamic acids have an important role on the beverage taste and quality of coffee beans and exhibit prominent antioxidant activity (Vignoli et al., 2014). These polyphenols have called attention due to their ability to scavenge radicals, thus restoring oxidative balance in physiological systems (Parras, Martínez-Tomé, & Jiménez, 2007).

### ~~Electrochemical behavior and determination of major ...~~

Hydroxycinnamic acids are the most widely distributed phenolic acids in plants. Broadly speaking, they can be defined as compounds derived from cinnamic acid. They are present at high concentrations in many food products, including fruits, vegetables, tea, cocoa, and wine.
