Richard E. Mayer (born 1947) is an American educational psychologist who has made significant contributions to theories of cognition and learning, especially as they relate to problem solving and the design of educational multimedia. Mayer's best known contribution to the field of educational psychology is multimedia learning theory, which posits that optimal learning occurs when visual and verbal materials are presented together simultaneously.

Biography, Richard E. Mayer is Distinguished Professor of Psychology at the University of California, Santa Barbara. His research interests are in applying the science of learning to education, with current projects on multimedia learning, computer-supported learning, and computer games for learning. His research is at the intersection of cognition, instruction, and technology, with a focus on how to help people learn in ways so they can transfer what they have learned to new situations.

**Richard Mayer | Psychological & Brain Sciences | UCSB**

Summary: A cognitive theory of multimedia learning based on three main assumptions: there are two separate channels (auditory and visual) for processing information; there is limited channel capacity; and that learning is an active process of filtering, selecting, organizing, and integrating information.
