What is the best way to structure primary care services? How can coordination between primary care and other parts of health care systems be improved? How should new technologies be integrated into primary care? There is considerable agreement among national policy makers across Europe that, in principle, primary care should be the

linchpin of a well-designed health care system. This agreement, however, does not carry over into the organizational mechanisms best suited to pursuing or achieving this common objective. Across western, central and eastern Europe, primary care is delivered through a wide range of institutional, financial, professional and clinical configurations. This book is a study of the reforms of primary care in Europe as well as their impacts on the broader co-ordination mechanisms within European health care systems. It also provides suggestions for effective strategies for future improvement in health care system reform. Primary Care in the Driver ' s Seat is key reading for students studying health policy, health economics, public policy and management, as well as health managers and policy makers.

Health care is changing fast and patients' experiences and expectations are also changing. Developments in information technology and biotechnology are already having a profound influence on the way health services are delivered and the organization of health care is under reform in most countries. Patients no longer see themselves as passive recipients of care: increasingly they expect to be involved in all decisions that affect them. This book reports the results of a major study carried out in eight different European countries to look at health policy dilemmas through the eyes of the patient. Drawing on literature reviews, focus groups and a survey of 1,000 people in each of the eight countries, the book addresses the following questions: . Why might the patients of the future be different? . What will patients and citizens expect from health systems? . Will the public be willing to pay more for better health care? . What kind of value trade-offs are people prepared to make, for example between prompt access and continuity of care, or between choice and equity? . How will patients access information, advice and treatment? . How should policy-makers and providers react to patients' desire for greater autonomy? . How can

public confidence in health systems be maintained in the future? The European Patient of the Future is a clear, jargon-free text which will be a key resource for all health service professionals, health policy analysts and patient advocates.
