More than a hundred years after its founding, psychoanalysis remains influential and controversial far outside its core sphere of activity in the 'clinic'. In a wide range of cultural and social disciplines, psychoanalytic ideas are drawn on to explain human subjectivity and its relationship with the social world. This lucid and engaging book explores these interventions through detailed examination of how psychoanalytic ideas apply in literature, politics, social psychology, philosophy and psychosocial studies. The highly-regarded and influential author, Stephen Frosh, shows how psychoanalysis can at times greatly illuminate these fields of study, and how at other times it might misread them. He also asks what psychoanalysis can learn from the disciplines with which it is in dialogue, and particularly how it can retain its own capacity for

critical thought. Sophisticated and stimulating, yet accessible and approachable, this important book:

- provides a critical exploration that will stimulate further debate about the place of psychoanalysis in intellectual life
- develops the newly emerging psychosocial perspective as one that links psychological and social theories in novel ways.

Psychoanalysis Outside the Clinic will be of profound interest to students and academics across a wide range of disciplines, particularly those taking courses in social, cultural or political theory at undergraduate or postgraduate level or studying on programmes in Psychoanalytic or Psychosocial Studies.

This issue of *Child and Adolescent Psychiatric Clinics* focuses on non-pharmacologic interventions for ADHD in children and adolescents. Editors Stephen Faraone's and Kevin Antshel's goal

with this publication is to help the clinician decipher the literature base in an attempt to make informed decisions and recommendations for the families that they treat in light of new non-pharmacologic interventions. To guide readers of this issue, Authors present information in a specific structure designed to describe the non-pharmacologic intervention theoretically and practically, as well as provide clinically useful information regarding who is most likely to respond and which outcomes are most likely to be affected by treatment. Likewise, Authors include information on adverse effects / contraindications of the non-pharmacologic treatments and how treatments should be sequenced and/or integrated with other treatments. Science is translated into clinical practice that can be easily applied; this volume strikes a balance between reviewing the evidence base and providing clinically useful information. Among

Edition of Ethics and Behavior, covering control groups in Psychosocial intervention research.

Many children live in circumstances that threaten their emotional and physical development. What they face - abuse, abandonment, neglect, domestic violence, homelessness, and parental mental illness - is painful in the extreme. This book describes innovative intervention techniques and modalities proven effective with thousands of these children over the last three decades. To demonstrate the treatment methods, pride of place is given to the children's (and parents') own voices and perceptions as well as to the therapeutic process itself. These interactions afford the reader an

opportunity to appreciate both the depth of the children's dilemmas and the difficulties inherent in resolving them. There is the story of Sam, for example, a foster child whose mother repeatedly breaks her promises to take him back. Sam must be helped to rely on his mother less in order to love himself more. What is described works. The treatment provides relief to the children in the here and now; follow-up data, including positive effects on IQ, family stability, and psychological functioning of individual children, show the positive results of treatment in their futures, as well.
