Wastewater treatment works have the potential to generate unpleasant odours, which can result in annoyance and consequently have a detrimental effect on a local population. As a result 'odour control and prevention' has become an important consideration both in the management of existing facilities and in the design and gaining of planning consent for new works. *Odours in Wastewater Treatment* provides readers with a detailed discussion

This book provides an overview of the phenomenology, technology and application of secondary ion mass spectrometry as a technique for materials analysis. This approach is developing into one of the most effective methods of characterizing the composition and chemical state of the surface and sub-surface layers of solid materials. The first three chapters introduce the basic physical and chemical principles involved and the theories which have been proposed to explain the process. Subsequent chapters describe the instrumental components of the SIMS apparatus, the use of SIMS as an

analytical tool, and the development of the techniques of sputtered neutral mass spectrometry and laser microprobe and plasma desorption mass spectrometry. Many practical examples are featured to illustrate the application of SIMS to real problems, possible pitfalls are pointed out, and data of use to analysts are collected in appendices. The book is a practical guide suitable for scientists in all fields who wish to use this valuable analytical technique.

classic work, *The Expansion of International Society* (OUP, 1984). For Bull and Watson, international society originated in Europe, and expanded as successive waves of new states were integrated into a rule-governed order. International society, on their view, was thus a European cultural artefact - a claim that is at odds with recent scholarship in history, politics, and related fields of research. Bringing together leading scholars from Asia, Australia, Europe, and the United States, this book provides an alternative account: it draws out the diversity of polities that existed at around c1500; it
