throw out the rule book of tradition and established practice, and start again with a blank sheet of paper, taking the technology of the day to its limits and then going another mile. Then there was Brunel the visionary, who knew that transport technology had the power to change the world, and that he had the ability to deliver those changes. Finally, there was Brunel the artist who rarely saw technology as just functional, and strove to entwine the fruits of the Industrial Revolution with the elegance and grace of the neo-classical painter. His bridges, tunnels and railway infrastructure have entered a third century of regular use, and the beauty of their design and structure has rarely been equalled. The three decades, from the 1830s to the 1850s, saw an explosion of technical excellence, and it was Brunel who in so many cases lit the blue touch paper. He did not always get it right first time, and it was left to others to reap the fruits of his many labours. Nevertheless, his actions fast-forwarded the march of progress by several decades.

A major new biography of Britain's greatest engineer, the visionary Isambard Kingdom Brunel

This series has been hugely successful and the new paperback of Isambard Kingdom Brunel is bound to invite even further triumphs. Each title tells the life story of an eminent individual in simple language, with a superb array of photographs. Isambard Kingdom Brunel was one of the greatest engineers of the nineteenth century and much of his work, from bridges and tunnels to shops and railways, is still standing today. This book describes how he came to be an engineer and some of the famous projects he worked on until his death in 1859. The photographs also provide an interesting insight into life in Victorian England.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Reproduction of the original: The Life of Isambard Kingdom Brunel by Isambard Brunel

From tunnels and railways to bridges and ships, Isambard Kingdom Brunel would stop at nothing to realise his amazing engineering ideas. Born at the beginning of the nineteenth century, Brunel had a brilliant brain for design, and never tired of building new and exciting things - the deepest tunnel, the longest bridge, the fastest train. For Brunel, the average and the ordinary were just not good enough. A perfectionist and a control freak, he would stop at nothing to complete a project, even when it meant taking hair-raising risks. Short Books is re-releasing some of its finest writing as a newly designed series of six children's biographies called The Great Victorians. These are entertaining and engaging stories of some of history's most fascinating characters. They tell history in a novelistic, engaging way, a halfway house between storybooks and traditional history. There is abundant humour and drama too. With beautifully designed covers these books will catch the eyes of parents as well as children. Also published in a highly collectable set.
