Functional brain mapping has by now gained a high impact on research and clinical practice: huge funds are unveiled all over the world in order to boost the research and clinical applications of this field of neuroscience. The most successful approach to unlock the mysteries of the brain, to tell it with Jay Ingram, is to bring together an interdisciplinary network of scientists and clinicians and encourage an interchange of ideas. It is this crossfire we try to promote with this book.

If you could choose a world without loneliness, without shame, grief, misery, or feeling of any kind, would you, if it also meant that you lost the simple pleasure of a picnic on a sunny day or the joy of falling in love? Would the allure of a comfortable numbness prove too tempting to resist? Could you choose between feeling pain and not feeling anything, ever again? A girl is caught in a world where this choice is fiercely contested. In the cross-fire between the Red and White empires, the feeling and the unfeeling, each bent on the other's destruction, the girl must choose between emotion and oblivion, joining the ranks with the Reds as they fight to resist the Whites, but all the while struggling with her own desperate ambivalence. *All That Is Red* is a story of survival and a journey through the human condition, revealing how the intimate euphoria of pain can sometimes be all we have to remind us that we are alive. Anna Caltabiano is fifteen years old. She was born in British colonial Hong Kong to a Japanese mother and an Italian-American father, before moving to Palo Alto, California; the mecca of futurism. Her writing explores and exposes an adolescent dystopia in which accepted traditions, religions, cultures and communities have been eroded, resulting in a lost generation consumed by social apathy and self-loathing which has found solace through electronic connections. Unsettling, engaging and surprisingly erudite, *All That Is Red* is a remarkably assured debut from an ascending literary

star.

This compilation presents original study results on the leading edge of neuroscience research. Each article has been carefully selected in an attempt to present substantial research results across a broad spectrum. Included in this volume are study results on the role of injured nerve-derived COX2/PGE2/EP signalling in the genesis of neuropathic pain; cannabinoid receptor- and metabotropic glutamate receptor-mediated signalling in neural circuits of the main olfactory bulb; cell replacement therapy in neuromuscular and neurodegenerative diseases; nociceptive circuitry in the anterior cingulate cortex in rodents; effects of hearing aid amplification on phase coherence of cortical auditory event-related potentials; thermal response of a motoneuron cluster; anterior cingulate cortex as a monitoring attentional system and its novel role in the unawareness of Alzheimer's disease; the role of rat anterior cingulate cortex in signal detection; distractor interference in visual motor tasks; and nervous excitability dynamics in a multisensory syndrome and its similitude with normals.
