The M48 Patton is an American first generation main battle tank (MBT) introduced in February 1952, being designated as the 90mm Gun Tank: M48. Mrs. Beatrice Ayer Patton, wife of the late General George S Patton christened it as a Patton. It was designed as a replacement for the M26 Pershing, M4 Sherman variants and M46 Pattons used in the Korean War, and as the successor to the M47 Patton.

M48 Patton - Wikipedia

The book tells the reader the M-48 is evolved from the somewhat unsuccessful M-47 Patton, itself a direct off shoot from the T-26/M-26/M-46 tank. However, the M-48 has a better turret and improved 90mm gun. The photos and writing in this handy little book will make a novice to the M-48 a semi-expert on the various models of the M-48.

Despite having been built with the shortcomings of the US experience in Korea in mind, it was never used in action in this war. In 1955, it was replaced in frontline units of the US Army by the more powerful and modern M48 Patton. A frame taken from a 1959 video of an M47 Patton in service in the Esercito Italiano.

The 50-ton M60s were deployed to Europe in case World War III broke out, and didn't see action in the Vietnam War, except for some bridge-laying and engineering variants. Instead, M48 tanks took on...

Meet the Patton: Why the M60 Tank Is Still A Killer After ...

The M48 Patton served as an interim tank in U.S. service until replaced by the U.S. Army's first main battle tank (MBT), the M60 Patton. The M48 served as the U.S. Army and Marine Corps's primary battle tank during the Vietnam War. It was widely used by U.S. Cold War allies, especially other NATO countries. The M48 Patton tank was designed to replace the previous M47 Pattons and M4 Shermans. Although largely resembling the M47, the M48 Patton was a completely new tank design.

M48A5 Patton - Global wiki. Wargaming.net

The Patton tank - more, specifically the M48A3 model - is indeliably linked to the Vietnam War. Though initially U.S. military leaders didn't think tanks could operate in Vietnam, the need for armor support and the Patton's demonstrated ability to function in the Southeast Asia setting meant the 52-ton metal monster was soon a vital player in the fighting.

The book tells the reader the M-48 is evolved from the somewhat unsuccessful M-47 Patton, itself a direct off shoot from the T-26/M-26/M-46 tank. However, the M-48 has a better turret and improved 90mm gun.

Amazon.com: Customer reviews: M48 Patton in Action - Armor ...

M47s were used by the Reserves for a relatively short time, soon being replaced by early production M48 Patton series tanks; thus, most of the M47s were exported in the late 1950s. [6] [7] The US Marine Corps also fielded M47s starting in late 1952; after the Korean War, all seven Marine tank battalions, three divisional, two reserve training, and two force level, all fielded M47s.

M47 Patton | Military Wiki | Fandom

The U.S. Marine Corps introduced the M48A3 Patton Tank and the M51A1 Ontos Anti-Tank vehicles to the Vietnam War in May of 1965, a war that many, including the Commander of Military Assistance Command, Vietnam (MACV), Army's Gen. Westmoreland, said armor had no place in. Marine armor proved so effective that the U.S. Army later followed suit.

M48 Patton by Robert Griffin | Book

The M47 Patton was an American main battle tank, a development of the M46 Patton mounting an updated turret, and was in turn further developed as the M48 Patton. It was the second American tank to be named after General George S. Patton, commander of the U.S. Third Army during World War II and one of the earliest American advocates of tanks in battle. The M47 was the U.S. Army's and Marine Corps' primary tank, intended to replace the M26 Pershing and M46 Patton medium tanks. The M47 was widely u

With Cold War fears mounting, the M47 and M48 were rushed into production – teething troubles were inevitable. In the decade that followed, however, these tanks proved to be the backbone of US armoured units. In its lifetime, the Patton has played vital roles in three wars, including Vietnam, and has served with more than 25 nations; it has spawned derivatives such as the Armored Vehicle Launched Bridge, an anti-aircraft variant, and has undergone diverse armament modifications. This book provides a comprehensive view of the M47 and M48 Patton tanks, combining technical information with fascinating accounts of the performance, development and deployment of this battle-tested and truly international fighting machine.

The Indo-Pakistani War of 1965 witnessed some of the largest tank battles since World War II, notably between India's British-made Centurion Mk 7s and the American-made M48 Pattons fielded by Pakistan. The two countries' tank regiments, many of which shared a proud legacy in the British Indian Army, fought one another in the difficult terrain of Jammu and Kashmir, the focus of a long-running dispute between India and Pakistan. The armoured clashes at Asal Uttar, Chawinda and Phillora would demonstrate that the Centurion, with its powerful gun and lower profile, generally proved superior to the faster, lighter but overly complex Patton. Featuring full-colour artwork, expert analysis and archive photographs, this is the full story of the clash between two leading tanks of the Cold War era that were never designed to fight each other, but rather to line up on battlefields as allies.

A fully illustrated and historically informative guide to building scale models of the U.S. Army's iconic Cold War main battle tank. The M48 Patton main battle tank was one of the longest-serving and most successful designs in the U.S. military. A significant advance from the Sherman and M47, the M48 formed the backbone of American armored forces during the early years of the Cold War. It saw combat in Vietnam, during the Indo-Pakistan wars and in the Middle East, especially during the Iran-Iraq War. Archive photos of the M48 in service and extensively researched color profile illustrations depict the tank throughout its operational life. A large part of the book showcases available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined and provide everything the modeler needs to recreate an accurate representation of the M48.

The M60 Main Battle Tank was conceived as the successor to the M48 Patton with the hope that it would prove a better adversary to the Soviet T-54A. Introduced in 1959, the 105mm-armed M60, and its variants, the M60A1 and M60A3, remained in production into 1987, forming the backbone of the U.S. armored force until it was supplanted by the M1 Abrams. In addition to the conventional cannon-armed versions of the M60, the M60A2 variant, sometimes dubbed "the starship," featured new departures in tank armament. The M60A2 was armed with a 152mm projector, which could fire a conventional round with a fully combustible casing, or

the MGM-51 Shillelagh anti-tank missile. Completing the M60 family were the M728 armored engineer vehicle, and the still-in-service M60 Armored Vehicle-Launched Bridge. Packed with 155 vintage color photos, 69 historic black-and-white images, by numerous fine line drawings, and a detailed data table, this 80-page volume traces the history of America's iconic Cold War tank.

Entering service in the early 1960s, the M60 tank was in production for 23 years and formed the backbone of US Army and Marine armoured units during the Cold War. Over 15,000 were built in four basic models: the M60, M60A1, M60A2, and the M60A3. Although the M60 had been phased out of US Army service by the time Iraq invaded Kuwait in 1990, M60s were amongst the first Allied tanks to enter Kuwait City with the US Marines. This book examines the design and deployment of the M60, a very widely used vehicle that is still in service today.

The end of WW2 and the early Cold War years saw the need for a more powerful tank than the Sherman and Pershing tanks. The first Patton tanks (M46) were converted Pershings which saw service in Korea. As the Cold War intensified, the M47 with a more effective 90mm gun and turret went into mass production (9000 built) and countered the Soviet build up. The M48 entered service in 1953 and the M47s were sold off to allies whose armies were being rebuilt. The original M48 had serious deficiencies. Nevertheless over 12000 of numerous variants (M48A1/A2/A2C) came into service. These were followed by the M48A3 which the Marines took to Vietnam. In the late 1950s the Americans overcame their aversion to diesel power and the M60 with its British designed 105mm gun came into service. By 1982 over

Acces PDF M48 Patton In Action

15000 units had been built in four basic models. Simultaneously 200 of the M48A5 with the 105mm gun went into service with the Army Reserve and National Guard and friendly foreign armies. To complicate matters, countries such as Israel made their own modifications to M48s which remained in service until the late 1990s. As this fascinating book reveals Pattons were made into specialist role vehicles, be they anti-aircraft, flame throwers, recovery, combat engineer.
