WHO | The Lancet Neonatal survival series

The initial fluid, electrolyte and glucose requirements can be estimated by weight and gestational age: Infants with gelatinous skin may require very large volumes. Skin epithelialization occurs at 48-72 hours after which volume requirements may sharply decline. Remember that fluid overloaded infants are at risk of PDA.

Based on her own harrowing experiences and her expertise as a psychiatric social worker, Jo Clancy addresses the parents of

Read PDF Neonatal Survival Guide

preterm babies, discussing the heartbreak and stress involved, the impact on the whole family of the death of the dream of a healthy full-term baby. She talks about how to survive leaving your baby behind after you've given birth, how to survive the long weeks while the baby is in the neonatal intensive care unit (NICU). She describes the experience of the mother's pain, the father's grief, the pain of the older children and the grandparents; how to cope with others' reactions to the birth, and the unbearable anguish when the baby dies. She describes the mixture of high delight and high anxiety when at last the baby comes home from the neonatal unit. A central motif of this hands-on survival guide is that parents

Read PDF Neonatal Survival Guide

must not be shy about seeking help, in fact they can't survive without it - whether from family, friends, coworkers, Social Security or the local school system. A useful reading list and resource guide will help new parents of preemies find what they need to survive. The book ends with the very moving diary Jo Clancy kept, addressed to her son Vincent, while he hovered for weeks between life and death in the infant intensive care unit. The whole emotional roller-coaster ride of joy at small improvements, and terror at the innumerable crises that make up the experience of parenting a preterm baby is there.

prescriptions, calculating IV fluids and feeds, laboratory reference values, and formulary information. A chapter on adolescent medicine addresses topics such as STDs, eating disorders, and suicide.

These interwoven stories and articles provide essential insights into the medical world of premature birth, and into what happens to these babies and their families when things don't go as planned.

Improved conditions of care for premature infants have led to markedly increased survival rates over the last few decades, particularly in very low and extremely low birth weight infants. Nutritional measures play a central

role in the long-term outcome, health and quality of life of these premature infants. In this publication, leading experts from all 5 continents present the most recent evidence and critical analyses of nutrient requirements and the practice of nutritional care (with the focus on very low birth weight infants) to provide guidance for clinical application. After the introductory chapters, covering nutritional needs and research evidence in a more general manner, topics such as amino acids and proteins, lipids, microminerals and vitamins, parenteral and enteral nutrition as well as approaches to various disease conditions are addressed. Due to its focus on critical appraisals and recommendations,
