The aim of this book with its detailed step-by-step colour photographs and diagrams, is to enable every owner to fix their diesel engine with ease. Troubleshooting tables help diagnose potential problems, and there is advice on regular maintenance and winterising and repair. Jean-Luc Pallas's enthusiasm for passing on his knowledge, as well as his clear explanations, precise advice and step-by-step instructions make this a unique book.

CO2 Laser Cutting explains and describes how engineering materials are cut using a CO2 laser. Information is given on the cutting of metals and non metals on a wide range of levels from practical advice and processing parameters to explanations of the physical and chemical reactions which take place in the cut zone. In an effort to make the

book as readable and informative as possible the subject is treated in a descriptive rather than a mathematical way. The benefit of CO2 Laser Cutting is twofold as it gives practical advice to the operator and technical advice to the researchers or scientist.

A study by the Bertelsmann Stiftung has come to the conclusion that a billion more people live under dictatorship now than was the case 15 years ago. The findings were the sum of research for the Bertelsmann Stiftung's "Transformation Index" in which the institute analyzed the quality of democracy, the market economy and leadership in 129 countries. While the researchers concluded that the number of people living in democracies rose from 4 billion to 4.2 billion between 2003 and 2017, they also found that 3.3 billion people lived under dictatorship last year compared to 2.3 billion in 2003. The report further warned that growing restrictions on citizens' rights and legal standards was an acute problem in democracies. This investigation is based on facts, but in part is a mockery to the most coward kind of people that lives in the planet on the expenses of the suffering of billions of us. That's why the title says: "fer-pect" instead of "perfect", inspired on the 2004 year Movie "Ferpect Crime" of Alex de la Iglesia, about an ambitious salesman will do anything for that big promotion he's been chasing, but inevitably, he will learn that there

is no such thing as the perfect crime. These criminals in power are convinced that will never face justice for their atrocities, but at the end they all finish like cartoon characters.

To the admirer of farm machinery in all its gritty splendor, the tractor is more than the mechanical workhorse of the modern field. It is a testament to American know-how, a work of mechanical art truly in the American grain. Among these hard-working machines, Ford tractors hold a special place after nearly a century of bringing innovation, dependability, and good old American muscle to farms and fields worldwide. This book provides a hands-on guide to restoring these venerable machines from the ground up, from the first models made to those produced as recently as 1965. With hundreds of full-color photographs, the guide is not just clear and easy-to-follow, but also a feast for the eyes for tractor aficionados. Beginning at the beginning--how to choose and buy your tractor--Tharran Gaines takes readers through step-by-step directions for the complete restoration of Fordson, Ford-Ferguson, and Ford tractors. In straightforward terms

he covers everything from troubleshooting and disassembly to engine and gearbox rebuilds, electrical work, reassembly, painting, and post-restoration care and maintenance. Informative photographs and proven tips, techniques, and money-saving advice from experienced restorers make the book an invaluable resource for amateur mechanic and professional alike. Also included is an appendix listing sources for parts, decals, tires, etc., as well as addresses for tractor clubs and collector associations.

A "Sonderforschungsbereich" (SFB) is a programme of the "Deutsche Forschungsgemeinschaft" to financially support a concentrated research effort of a number of scientists located principally at one University, Research Laboratory or a number of these situated in close proximity to one another so that active interaction among individual scientists is easily possible. Such SFB are devoted to a topic, in our case "Deformation and Failure in Metallic and Granular MaterialK' , and financing is based on a peer reviewed proposal for three (now four) years with the intention of several prolongations after evaluation of intermediate progress and continuation reports. An SFB is terminated in general by a formal workshop, in which the state of the art of the achieved results is presented in oral or I and poster communications to which also guests are invited with whom the

individual project investigators may have collaborated. Moreover, a research report in book form is produced in which a number of articles from these lectures are selected and collected, which present those research results that withstood a rigorous reviewing process (with generally two or three referees). The theme deformation and failure of materials is presented here in two volumes of the Lecture Notes in Applied and Computational Mechanics by Springer Verlag, and the present volume is devoted to granular and porous continua. The complementary volume (Lecture Notes in Applied and Computational Mechanics, vol. 10, Eds. K. HUTTER & H.
