Object-oriented programming takes the view that what we really care about are the objects we want to manipulate rather than the logic required to manipulate them. Examples of objects range from human beings (described by name, address, and so forth) to buildings and floors (whose properties can be described and managed) down to the little widgets on a computer desktop (such as buttons and scroll bars).

What is object-oriented programming (OOP)?

V Visual Basic 1.0 (way before VB.NET), was not originally object oriented. For a language to be object-oriented it needs to have class definitions, inheritance, polymorphism, and encapsulation (according to Grady Booch).
