Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

The report discusses how economic instruments can be used to reduce CO2 emissions from passenger cars in the Nordic countries. The analysis indicate that: the registration tax and the annual circulation tax can contribute to a reduction in the average CO2 emission from new cars; company car schemes in the Nordic countries provide incentives for larger cars and increased driving because of subsidies, and this has long term effect as a large share of new cars are registered as company cars but are used as private cars most of their lives; CO2 differentiated taxes can provide incentives to consumers to purchase CO2 efficient cars; targeted broader packages which besides providing tax incentives also offer advantages to more environmentally friendly cars can be more effective than general tax increases; transparency of targets and instruments is crucial for a large diffusion of CO2 efficient cars.
