These same thoughts can be applied to any retrosynthesis problem from two through 100 steps and more. Ok, perhaps I'm exaggerating, your professor will hopefully limit your retrosynthesis problems to three to seven steps. Now that you have the basics for how to approach retrosynthesis, you will need a solid foundation.

The basic idea of retrosynthesis problems is that you have a product in mind and need to figure out how to make it from basic starting materials. Retrosynthesis problems require two major skills: (1) puzzle-solving skills and (2) a solid knowledge of reactions (which is the memorization part).

Retrosynthesis is a technique chemists use to identify how to synthesise a molecule through approaching the problem backwards.

Effectively retrosynthesis starts from the wanted product and works backwards chopping and changing the molecule into smaller pieces to identify what the previous molecule can be made from.
