Programming in Scilab Micha el Baudin
September 2011 Abstract In this document, we

Read Free Scilab By Example

present programming in Scilab. In the first part, we present the management of the memory of Scilab. In the second part, we present various data types and analyze programming methods associated with these data structures. In the third part, we present features to design flexible and robust functions. In the last ...

Scilab by Example by - Amazon.ae

In the example above, the function `f` is a vector and `x` is function argument and index. Evaluating function `f` in the Scilab console, for different values of `x` is not very efficient and it's time consuming. A better way to do it is to use a conditional loop. This means that we will evaluate an instruction repeatedly until a condition is satisfied.

Scilab programming - FOR loops - x-engineer.org

Let's understand "for" and "while" loops in Scilab by taking a simple example of finding the sum of the first 10 numbers. In the "for" loop, commands are executed repeatedly until `i` takes all the values in the specified range or in the specified row vector.
