Security For Web Developers Using

09. Get website security tools. Once you think you have done all you can then it's time to test your website security. The most effective way of doing this is via the use of some website security tools, often referred to as penetration testing or pen testing for short. There are many commercial and free products to assist you with this.

9 security tips to protect your website from hackers ...

The more formal definition of website security is the act/practice of protecting websites from unauthorized access, use, modification, destruction, or disruption. Effective website security requires design effort across the whole of the website: in your web application, the configuration of the web server, your policies for creating and renewing passwords, and the client-side code.

Website security - Learn web development | MDN

Use Security Tools. Apart from a web application security scanner, you should also use a network security scanner and other relevant tools to scan the web server and ensure that all services running on the server are secure. Security tools should be included in every administrator's toolbox.
