~~The shock absorber mounting (suspension strut support bearing) is the upper attachment/pivotal point between the shock absorber and chassis. This has to face many challenges, such as adverse weather conditions, which is why it is classed as a 'wear and tear' part.~~

~~Homepage - BOGE - ZF~~

~~Over the last 20 years, in addition to standard shock absorbers with a fixed characteristic curve, ZF has been offering shocks with Continuous Damping Control (CDC) as well as semi-active damping systems. sMOTION - still in the prototype phase - now completes this product range as an active system at the top end.~~

~~Here's how the damping system technology works - ZF~~

~~The proper disposal of shocks is an important topic for ZF. After all, environmental protection is a key corporate objective. According to our corporate philosophy, product quality includes not only optimum operating properties, long service life and convenient installation, but also saving resources, recycling and preserving the environment.~~
