any student of engineering or materials to master is the behaviour of materials and structures under load. The way in which they react to applied forces, the deflections resulting and the stresses and strains set up in the bodies concerned are all vital considerations when designing a mechanical component such that it will not fail under predicted load during its service lifetime. Building upon the fundamentals established in the introductory volume Mechanics of Materials 1, this book extends the scope of material covered into more complex areas such as unsymmetrical bending, loading and deflection of struts, rings, discs, cylinders plates, diaphragms and thin walled sections. There is a new treatment of the Finite Element Method of analysis, and more advanced topics such as contact and

residual stresses, stress concentrations, fatigue, creep and fracture are also covered. Each chapter contains a summary of the essential formulae which are developed in the chapter, and a large number of worked examples which progress in level of difficulty as the principles are enlarged upon. In addition, each chapter concludes with an extensive selection of problems for solution by the student, mostly examination questions from professional and academic bodies, which are graded according to difficulty and furnished with answers at the end.

which they react to applied forces, the deflections resulting and the stresses and strains set up in the bodies concerned are all vital considerations when designing a mechanical component such that it will not fail under predicted load during its service lifetime. All the essential elements of a treatment of these topics are contained within this course of study, starting with an introduction to the concepts of stress and strain, shear force and bending moments and moving on to the examination of bending, shear and torsion in elements such as beams, cylinders, shells and springs. A simple treatment of complex stress and complex strain leads to a study of the theories of elastic failure and an introduction to the experimental methods of stress and strain analysis. This book by Mick Duckworth, centres on the definitive history of London's Ace Cafe, the roadside pull-in that became the most famous haunt of motorcycle riding Ton-up kids in the Fifties and Rockers in the Sixties. The book also tells the story of other lively bikers haunts of the past, like the 59 Club, the Busy Bee and other cafes around the country. A substantial high-quality volume packed with personal recollections and evocative photos, Ace Times also looks at the fastest motorcycles, the loudest music, the iconic movies and the distinctive clothing of the cafe-racing era. Burn-ups, press hysteria, rock'n'roll riots, police-baiting, Mods and Rockers, pirate radio and loads more besides are all portrayed in a true-to-life, unembroidered way.

Felting is an ancient craft that enjoys an endless variety of forms and uses. Felt Fashion captures the art and sophistication that is possible with handmade felt, while keeping it simple and attainable for anyone to master. Whether it's a collar or an entire dress, each project is irresistible and brings felting to an entirely new level. The author demonstrates several basic felting techniques including: basic wet felting, needle felting, nuno, and punch needle felting. For the more advanced fiber artist and sewer, she provides patterns and instructions for original clothing designs including vests, jackets, and skirts. Felt Fashion is a standout from other felting books for its scope, originality, and its distinct ties to couture.

series is available by specific marque, in individual volumes or a set. Each book contains in-depth profiles of specific makes by model, factory photos, and up-to-date vehicle pricing. The I-to-conditional pricing system assures readers of accurate values, whether a vehicle is a #1 low-mileage, rust-free beauty or a #6 parts-only heap. "Techs & specs", original factory prices, production and serial numbers, and engine/chassis codes are noted by model, thus helping you determine authenticity accuracy. Historical, technical and pricing information are combined from hundreds of sources. James Flammang values each model according to the popular 1-6 grading system invented by Old Cars magazine.

For years, Derrick Jensen has asked

his audiences, "Do you think this culture will undergo a voluntary transformation to a sane and sustainable way of life?" No one ever says yes. Deep Green Resistance starts where the environmental movement leaves off: industrial civilization is incompatible with life. Technology can't fix it, and shopping—no matter how green—won't stop it. To save this planet, we need a serious resistance movement that can bring down the industrial economy. Deep Green Resistance evaluates strategic options for resistance, from nonviolence to guerrilla warfare, and the conditions required for those options to be successful. It provides an exploration of organizational structures, recruitment, security, and target selection for both aboveground and underground action. Deep Green
