Snapping hip syndrome is a condition where one feels 'snapping' sensation in hip while walking, getting up from a chair or while swinging the leg around. This is accompanied by popping or snapping noise. Pain and discomfort is felt in some cases. This pain decreases with rest and diminished activity.

## Snapping Hip Syndrome - Physiotherapy Treatment

Snapping hip syndrome, also referred to as dancer's hip, is a medical condition characterized by a snapping sensation felt when the hip is flexed and extended. This may be accompanied by a snapping or popping noise and pain or discomfort. Pain often decreases with rest and diminished activity. Snapping hip syndrome is commonly classified by the location of the snapping as either extra-articular or intra-articular.

## Snapping hip syndrome - Wikipedia

wide tendon that runs over the outside of the hip joint. Snapping hip syndrome occurs when the Iliotibial band snaps over the bony prominence over the outside of the hip joint. People with this type of snapping may also develop Trochanteric bursitis from the irritation of the bursa in this region. The second cause for snapping is the Iliopsoas tendon which can catch on a bony

## [Snapping Hip - wsh.nhs.uk](http://wsh.nhs.uk)

Snapping Hip Snapping hip is a condition in which you feel a snapping sensation or hear a popping sound in your hip when you walk, get up from a chair, or swing your leg around. The snapping sensation occurs when a muscle or tendon (the strong tissue that connects muscle to bone) moves over a bony protrusion in your hip.

## [Snapping Hip - OrthoInfo - AAOS](#)

A snapping hip is the snap or click caused by the movement of the muscles and tendons around the hip joint. This is felt while walking, running, getting up or when swinging the legs backwards. With hip flexion the iliotibial band moves from the posterior to the front side of the great trochanter producing the snapping sensation.

## [Snapping hip \(coxa saltans\) - Lex Medicus Pathologies](#)

Snapping hip syndrome, also known as coxa saltans (or dancer's hip), is a clinical condition characterized by an audible or palpable snapping sensation that is heard during movement of the hip joint. Snapping hip has multiple etiologies and is classified based on the anatomic structure that is the cause/source of the snapping sensation.
