Software testing reduces the presence of defects. Software testing talks about the presence of

defects and doesn't talk about the absence of defects.

Software testing can ensure that defects are present but it can not prove that software is defects free. Even multiple testing can never ensure that software is 100% bug-free.

Testing can reduce the number of

removes all defects.

testing, as I believe
that good testing
practices can both
ensure a minimum
quality standard
(sadly lacking in
