The Economics of Ecosystems and Biodiversity (TEEB) is a global initiative focused on “making nature’s values visible”. Its principal objective is to mainstream the values of biodiversity and ecosystem services into decision-making at all levels. It aims to achieve this goal by following a structured approach to valuation that helps decision-makers recognize the wide range of benefits provided by ecosystems and biodiversity, demonstrate their values in economic terms and, where ...

The Economics of Ecosystems and Biodiversity was a study led by Pavan Sukhdev from 2007 to 2011. It is an international initiative to draw attention to the global economic benefits of biodiversity. Its objective is to highlight the growing cost of biodiversity loss and ecosystem degradation and to draw together expertise from the fields of science, economics and policy to enable practical actions. TEEB aims to assess, communicate and mainstream the urgency of actions through its five deliverable

Wikipedia  
'TEEB brings a rigorous economic focus to bear on the problems of ecosystem degradation and biodiversity loss, and on their impacts on human welfare. TEEB is a very timely and useful study not only of the economic and social dimensions of the problem, but also of a set of practical solutions which deserve the attention of policy-makers around the world.'

The Economics of Ecosystems

The Economics of Ecosystems and Biodiversity, or TEEB, was conceived at the meeting of environment ministers in Potsdam in 2007. Its goal is to end the economic invisibility of nature—to help stakeholders and beneficiaries recognize the value of ecosystem services, those benefits that nature provides to the human economy, and to reward responsible custodians of Earth's ecosystems and biodiversity.
