The Interpersonal World Of The Infant: A View from ...

The Interpersonal World of the Infant is one of the most prominent works of psychoanalyst Daniel N. Stern, in which he describes the development of four interrelated senses of self. These senses of self develop over the lifespan, but make significant developmental strides during sensitive periods in the first two years of life. The mother or other primary attachment figure plays a critical role in helping the infant with this developmental process.

A philosophical account of the structure of experience and how it depends on interpersonal relations, developed through a study of auditory verbal hallucinations and thought insertion. In *Real Hallucinations*, Matthew Ratcliffe offers a philosophical examination of the structure of human experience, its vulnerability to disruption, and how it is shaped by relations with other people. He focuses on the seemingly simple question of how we manage to distinguish among our experiences of perceiving, remembering,

imaging, and thinking. To answer this question, he first develops a detailed analysis of auditory verbal hallucinations (usually defined as hearing a voice in the absence of a speaker) and thought insertion (somehow experiencing one's own thoughts as someone else's). He shows how thought insertion and many of those experiences labeled as “hallucinations” consist of disturbances in a person's sense of being in one type of intentional state rather than another. Ratcliffe goes on to argue that such experiences occur against a backdrop of less pronounced but wider-ranging alterations in the structure of intentionality. In so doing, he considers forms of experience associated with trauma, schizophrenia, and profound grief. The overall position arrived at is that experience has an essentially temporal structure, involving patterns of

anticipation and fulfillment that are specific to types of intentional states and serve to distinguish them phenomenologically. Disturbances of this structure can lead to various kinds of anomalous experience. Importantly, anticipation-fulfillment patterns are sustained, regulated, and disrupted by interpersonal experience and interaction. It follows that the integrity of human experience, including the most basic sense of self, is inseparable from how we relate to other people and to the social world as a whole.

The widely accepted disease model of addiction overlooks the fact that helping addicts to change their lives is fundamentally an interpersonal and societal act, because even the seemingly objective chemical effects of cocaine are inevitably integrated into a larger world of

meanings and relationships. Addicts are demonized in our society, and the consequences of their social alienation profoundly affect not only them but also their therapists and the process of therapy as well. Mark and Faude describe an approach to treating cocaine addiction whose centerpiece is learning to develop "relationship episodes" with the patient - concrete narratives of actual events in the patient's life. Sharing generous clinical examples, they demonstrate how engagement in this mutual activity illuminates and transforms the subjective, interpersonal, and cultural experience of the cocaine user.

commissioned for this volume, aimed at unravelling the intricate entanglements of media, society, and the individual. The broad range of contributors includes Anthony Smith, Sari Thomas, Michael Arlen, Susan Sontag, James Lull, and Gaye Tuchman. Emphasizing education, business, and telecommunications, this edition provides eighteen new essays on timely subjects such as how and what children learn from television, the impact and role of computers on the home, the school, and the workplace, and the meaning and use of the family snapshot. Divided into four topical sections, The Media and Interpersonal Connection, Media, Intimacy and Interpersonal Networks, Mediated Reality, and Media Values, the book's organization provides a structure for reading and discussion

as the product of interpersonal interaction—in its formation and in its growth and development across the life cycle. Many clinical examples illustrate the theory of the interpersonal unconscious and its application to individual psychotherapy and psychoanalysis, couple and family therapy, and child therapy, and to teaching mental health professionals nationally and internationally.

North American psychoanalysis has long been deeply influenced and substantially changed by clinical and theoretical perspectives first introduced by interpersonal psychoanalysis. Yet even today, despite its origin in the 1930s, many otherwise well-read psychoanalysts and psychotherapists are not well informed about the field. The Interpersonal Perspective in

Psychoanalysis, 1960s–1990s provides a superb starting point for those who are not as familiar with interpersonal psychoanalysis as they might be. For those who already know the literature, the book will be useful in placing a selection of classic interpersonal articles and their writers in key historical context. During the time span covered in this book, interpersonal psychoanalysis was most concerned with revising the understanding of the analytic relationship—transference and countertransference—and how to work with it. Most of the works collected here center on this theme. The interpersonal perspective introduced the view that the analyst is always and unavoidably a particular, "real" person, and that transference and countertransference need to be reconceptualized to take the analyst's individual humanity into account. The relationship needs to be

grasped as one taking place between two very particular people. Many of the papers are by writers well known in the broader psychoanalytic world, such as Bromberg, Greenberg, Levenson, and Mitchell. But also included are those by writers who, while not as widely recognized beyond the interpersonal literature, have been highly influential among interpersonalists, including Barnett, Schechter, Singer, and Wolstein. Donnel B. Stern and Irwin Hirsch, prominent interpersonalists themselves, present each piece with a prologue that contextualizes the author and their work in the interpersonal literature. An introductory essay also reviews the history of interpersonal psychoanalysis, explaining why interpersonal thinking remains a coherent clinical and theoretical perspective in contemporary psychoanalysis. Psychoanalysis, 1960s–1990s will appeal greatly to psychoanalysts and psychoanalytic psychotherapists wanting to know more about interpersonal theory and practice than can be learned from current sources.

Edgar A. Levenson is a key figure in the development of interpersonal psychoanalysis whose ideas remain influential. *Interpersonal Psychoanalysis and the Enigma of Consciousness* builds on his previously published work in his key areas of expertise such as interpersonal psychoanalysis, transference and countertransference, and the philosophy of psychoanalysis, and sets his ideas into contemporary context. Combining a selection of Levenson's own writings with extensive discussion and analysis of his work by Stern and Slomowitz, it provides an invaluable guide

to how his most recent, mature ideas may be understood and applied by contemporary psychoanalysts in their own practice. This book explores how the rational algorithm of psychoanalytic engagement and the mysterious flows of consciousness interact; this has traditionally been thought of as dialectical, an unresolvable duality in psychoanalytic practice. Analysts move back and forth between the two perspectives, rather like a gestalt leap, finding themselves listening either to the "interpersonal" or to the "intrapsychic" in what feels like a self-state leap. But the interpersonal is not in dialectical opposition to the intrapsychic; rather a manifestation of it, a subset. The chapters pick up from the themes explored in *The Purloined Self*, shifting the emphasis from the interpersonal field to the exploration of the enigma of the flow of consciousness that underlies the

therapeutic process. This is not the Freudian Unconscious nor the consciousness of awareness, but the mysterious Jamesian matrix of being. Any effort at influence provokes resistance and refusal by the patient. Permitted a "working space," the patient ultimately cures herself. How that happens is a mystery wrapped up in the greater mystery of unconscious process, which in turn is wrapped into the greatest philosophical and neurological enigma of all—the nature of consciousness. *Interpersonal Psychoanalysis and the Enigma of Consciousness* will be highly engaging and readable; Levenson's witty essayist style and original perspective will make it greatly appealing and accessible to undergraduate and postgraduate students of psychoanalysis and psychoanalytic psychotherapy, as well as practitioners in these fields.
