Drawing on a wealth of knowledge and experience and a background of more than 1,000 magazine articles on the subject, engine control expert Jeff Hartman explains everything from the basics of engine management to the building of complicated project cars. Hartman has substantially updated the material from his 1993 MBI book Fuel Injection (0-879387-43-2) to address the incredible developments in automotive fuel injection technology from the past decade, including the multitude of import cars that are the subject of so much hot rodding today. Hartman's text is extremely detailed and logically arranged to help readers better understand this complex topic.

The Just-in-time (JIT) manufacturing system is an internal system in use by its founder, Toyota Motor Corporation, but it has taken on a new look. Toyota Production System, Second Edition systematically describes the changes that have occurred to the most efficient production system in use today. Since the publication of the first edition of this book in 1983, Toyota has integrated JIT with computer integrated manufacturing technology and a strategic information system. The JIT goal of producing the necessary items in the necessary quantity at the necessary time is an internal driver of production and operations management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to further reduce costs, increase quality, and improve lead time. The new Toyota production system considers how to adapt production schedules to the demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, Toyota Production System, published in 1983, is the basis for this book. It was translated into many languages including Spanish, Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world.

This book addresses two of the most important trends in political economy during the last two decades - globalization and decentralization - in the context of the world's most rapidly growing economic power, China. The intent is to provide a better understanding of how local political and economic institutions shape the ability of Chinese state-owned firms to utilize foreign direct investment (FDI) to remake themselves in the transition from inefficient and technologically backward firms into powerful national champions. In a global economy, the author argues, local governments are increasingly the agents of industrial transformation at the level of the firm. Local institutions are durable over time, and they have important economic consequences. Through an analysis of five Chinese regions, the treatment seeks to specify the opportunities and constraints that alternative institutional structures create, how they change over time, and ultimately, how they prepare Chinese firms for the challenge of global competition.
