Tuning a Rotary Engine - Technically Speaking - YouTube
When tuning the target fuel map, rotary engines like to run rich compared to a piston engine. A good starting point for a rotary engine fuel map at idle is between 13.5:1 and 14.1:1, low 11 ' s at atmospheric pressure and when under boost, quickly richening up to a flat 10.5:1 through redline. You will notice that a rotary engine will make similar power at an AFR of 10:1 as it would at 13:1.

smaller than they would be on a run of the mill production car where little attention has been made to tuning them up.

RX8 performance Tuning modifications remaps and turbo kits.

The illustrated engine features a poppet intake valve, however many engines use a rotary valve incorporated into the crankshaft. During the downward stroke the poppet valve is forced closed by the increased crankcase pressure. The fuel mixture is then compressed in the crankcase during the remainder of the stroke.
