Excel Solver is an optimization tool that can be used to determine how the desired outcome can be achieved by changing the assumptions in a model. It is a type of what-if analysis and is particularly useful when trying to determine the

"best" outcome, given a set of more than two assumptions.

Solver is an optional add-in designed to do more complex "what-if" calculations using different solving methods. The main advantage is Solver allows you to work with variables and constraints. If you recall my Goal Seek article, my total vote count number increased.
